

ARCLIGHT

MAINNET DAY-ONE

The revenue-backed launchpad for Arc — where the market, not the team, controls the money

Launchpad × Prediction Markets × Revenue-Based Financing • Rahul Bhatia • rbhatia610@gmail.com

0

launchpads or prediction
markets on Arc today

3

categories claimed
with one product

60%

of ARC supply reserved
for ecosystem builders

100%

of escrow refundable
until milestones hit

Launchpads sell promises: funds leave escrow on day one, backers carry 100% of execution risk, serious builders stay away.

HOW IT WORKS

Backers also receive revenue-share tokens — pro-rata claims on future USDC cash flows, streamed onchain. Real yield, not governance vibes.
Pre-raise YES prices form a public, skin-in-the-game credibility score for every project on Arc. NO shares double as failure insurance.

WHY IT WINS

RUG-PROOF BY DESIGN

Funds are milestone-gated by market consensus, not promises. Backer downside is capped at tranches already released.

TOKENS BACKED BY CASH FLOW

Launches sell revenue-share tokens with USDC yield — the only asset Arc's institutional liquidity actually wants to buy.

SEALED-BID, SNIPE-FREE

Arc privacy primitives enable batch auctions with a uniform clearing price. No bots, no MEV, no block-one sniping.

ONLY POSSIBLE ON ARC:

USDC-native escrow

Sub-second finality

Sealed-bid privacy

Native FX / EURC

Compliance-ready

WHY NOW

First mover claims three categories at once — and testnet contracts are already live before the ecosystem fund starts deploying.

REVENUE MODEL

Listing fees • 2–3% of raise per milestone •
AMM fees on milestone markets • servicing
spread on revenue streams •
credibility-score data feed

STATUS

v0 escrow + milestone contracts compiled
and deploying to Arc Testnet (chain
5042002). v1: LMSR milestone markets,
optimistic oracle, revenue streaming.

THE ASK

Ecosystem grant • day-one launch partner
status • market-maker intros for milestone
liquidity • early access to privacy primitives.
